

# IDDEX

For Hotels

 AdriaScan

## IDDEX for Hotels

IDDEX is a software solution that uses high speed [passport/ID scanners](#) to capture correct data from documents and transfer them directly to hotel software.

All-in-one solution for automated data entry from scanned identity documents into hotel PMS.

Within a few seconds, it auto-populates guest profile with data from passports, ID cards and drivers' licenses.

Enables easy connection of almost any passport/ID scanner with over [100 Hotel PMS](#).

## Used by [thousands](#) hotels

IDDEX is designed to help front office staff to easily identify guest, automate and speed-up check-in process and digitalize guest records. Thousands of hotels globally already adopted passport/ID scanner as a common standard and it is becoming an irreplaceable tool for [automated data capture](#) and [document authentication](#).

## Key benefits

### CHECK-IN

Reduce guest check-in time by using high speed passport/ID scanners

### ACCURACY

Avoid typing errors and get more accurate guest data

### DIGITALIZING

Eliminate photocopying and store digital images if needed

### LEGAL

Comply with local legislation and be in line with GDPR

### HOSPITALITY

Focus valuable time to personalize guest service instead of typing data

### SECURITY

Prevent unwanted individuals and increase security for your guests

## Interfaces

IDDEX is used to read and transfer data from scanned document to business applications. It does not contain database and **with interface** to hotel software [PMS] it enables **automatic data transfer** directly to guest profile.

Scanning process is started from hotel software which makes data collection easy and painless process for front desk staff.

IDDEX API allows seamless and **secure** integration with any software, no matter is it cloud or desktop-based solution.

100+  
interfaces

# Document Readers

Thales Gemalto Document Readers supplied with AdriaScan IDDEX are designed to efficiently execute various operations from a simple image capture to the most advanced document authentication forensic tests.
